

1. select location.locno, locname
2. from location JOIN facility
3. on facility.facno = location.facno
4. where facname='Basketball arena';

The screenshot shows a database query tool interface. The top bar includes a 'Start Page' button, a user profile 'SaiSirisha', and a timer '0.015 seconds'. Below the bar, there are two tabs: 'Worksheet' and 'Query Builder'. The 'Query Builder' tab is active, displaying a SQL query in a text area:

```
select location.locno, locname
from location JOIN facility
on facility.facno = location.facno
where facname='Basketball arena';
```

Below the query editor, there is a 'Script Output' section. It shows a status bar with 'Task completed in 0.015 seconds'. Below this, a table displays the results of the query:

LOCNO	LOCNAME
L103	Locker room
L105	Gate
